

# CDP Global Forest Report 2014 was Released

CDP's global Forests Report 2014 draws in the disclosures from 152 companies, representing a market capitalization of over US\$3 trillion, on four key forest-risk commodities - cattle products, palm oil, timber products and soy.

Produced by CDP in behalf of 240 investor signatories representing US\$15 trillion in invested assets, the report focuses on the corporate commitments to breaking the link between deforestation and commodities in company supply chains.

The report is designed around a roadmap, describing how corporate commitments to cutting deforestation can be translated into action.
